effectively studied by looking at the "inputs" and "outputs" of the political system. scientific and technical work is made invisible by its own success. When a machine runs efficiently, when a matter of fact is settled, one need focus only on its inputs and outputs and not on its internal complexity. composed of black boxes which in turn are composed of black boxes. 2. The black box captures behavior through the transformation of inputs into outputs. 3. This, in turn, gives rise to structure through the allocation of behavior to objects. 4. Finally, black boxes clearly define system boundaries The Application of Black Box Theory to System Development The BOXES Methodology : Black Box Dynamic Control..
